

10 Reasons to Choose FlexNet® - a Utility Defined Solution

What does it mean to be a utility-defined solution? Here are ten reasons why FlexNet is the superior choice to take your utility from now to next.

1. Designed just for you.

FlexNet is purpose built for utilities, with each FlexNet System custom designed for your needs by our in-house RF Engineers. From large Investor Owned Utilities to small Co-operatives and everything in between, FlexNet is designed from the ground up for each of our utility customers.

2. Enduring.

FlexNet Systems provide a 20-year service life, so your system can keep delivering excellence.

3. Proven.

Sensus has extensive water, electric, and gas utility industry experience. FlexNet equals guaranteed performance dedicated to your utility's needs.

4. First-Rate.

FlexNet offers top-tier performance for billing read collection, alarm condition reporting, remote over-the-air configuration and firmware updates, and remote operation actions at switch- and valve-enabled meters in the field.

5. Timeless.

FlexNet maintains backwards compatibility with your existing meters and other endpoints in the field, while also supporting new solutions. In fact, FlexNet systems continue to support all FlexNet endpoints deployed since 2006.

6. Stable.

FlexNet allows consistent solutions and performance across the entire utility service territory in good weather and severe weather events. By a wide margin, FlexNet systems provide faster and more reliable outage and power restoration notifications.

7. Dependable.

FlexNet offers the best performance in hard-to-reach locations and many different terrains, because Sensus' FCC primary license RF frequencies enable us to transmit over long distances. Your FlexNet system will be custom designed and deployed for your service area— including local terrain and clutter—for your company's needs.

8. Comprehensive.

FlexNet is an end-to-end solution from one vendor. That means your utility has one number to call for your concerns and you have total control over your entire system.

9. Seamless.

FlexNet allows for easy one-stop-shop integration with your existing systems—and that integration is provided by our highly skilled professional services team.

10. Dedicated and Guaranteed.

Your FlexNet system and its assigned RF frequencies are exclusively licensed to your utility for the life of the system. This dedicated use is protected by the FCC; no one else is allowed to use your RF frequencies in your service area.

Choose a Utility-Defined Solution

With FlexNet, your Smart Utility Network needs can be achieved with one system that has been designed from the ground up for each of our utility customers. FlexNet brings you the lowest total cost of ownership while continuing to support your deployment for 20 years.
