CHLOROPHYLL AND PHYCOBILIN DETECTION

**EARLY DETECTION  
IS YOUR  
BEST DEFENSE**

## Harmful algal blooms are more frequent and more intense than ever before.

HABs are a threat to public health, the environment, and economies worldwide. YSI's **Total Algae Sensors** are for early detection, enabling rapid response and management.

### Our dual-channel sensor can help you to:

Take action as early as possible for mitigating HAB impacts

Plan a rational approach for sample collection, saving time and money

Understand the seasonal and weather-related patterns in your system

Understand the relevance of other parameters like pH, DO, and temperature
