

Installation & commissioning

GET YOUR ASSETS UP AND RUNNING FAST

Best use of available resources

Installation and commissioning of water and wastewater facilities and the systems that control them require engineering expertise and specialist advice.

This can be overwhelming when both the resources and capabilities to conduct these services are limited. There are, however, services available that reduce your overhead, minimize risk and ensure your facilities are ready for use.

What it is

Xylem TotalCare provides comprehensive installation and commissioning services at municipal and industrial facilities for all Flygt, Godwin, Leopold, Sanitaire and Wedeco equipment and solutions. We ensure that the installation is up and running quickly and efficiently and meets all legislative requirements. This eliminates the need for in-house installation and project management services.

How it works

Certified engineers with the required expertise provide complete process engineering services. We provide project management, installation and commissioning services for startup, training and maintenance.

We bring our vast technical experience and engineering expertise with installations around the world to your facility. This not only includes knowledge of our own equipment, but that of other manufacturers as well.

Why it makes sense

Our broad installation and commissioning services enable you to simplify administration, get your site operational quickly and reduce costs. Your system is perfectly matched to your requirements and finetuned to provide maximum system availability and productivity right from the start.

Why Xylem TotalCare

When you work with Xylem TotalCare services, you get secure, optimal operations that come only with broad engineering expertise in water and wastewater.

- Eases both installation and startup processes
- Reduces risk as well as overhead
- Simplifies the process with a single purchase order and single point of contact
- Meets ISO 9000 and 14001 requirements

Case study 1

CHALLENGE: Commissioning and startup of a new sewage lift station

SOLUTION: Qualified Xylem engineers assisted the contractor with inspection, commissioning and startup of Flygt pumps, accessories and monitoring and control equipment. With water in the wet well, our experts calibrated the pump, verified all accessories and configured the control equipment.

Case study 2

CHALLENGE: Installation and commissioning of the world's largest ozone system at a WWTP in Victoria, Australia, which treats flow rates of up to 700,000 m³/day.

SOLUTION: A customized, turnkey solution provided by certified Xylem service technicians over a six-month period that resulted in five WEDECO ozone systems (PDO) that produce up to 625 kg of ozone.

Price

You pay for services according to an hourly rate or agree to a fixed price. To keep your maintenance costs down, please take a look at Xylem TotalCare maintenance contracts.
